- Maximum Profile Height (Rz): The vertical distance between the highest peak and the lowest valley.
- Ten Point Mean Roughness (Rz): Average of the five highest peak-to-valley measurements.

These parameters quantify surface irregularities that are often invisible to the naked eye but influence the component's interaction with its environment, such as friction, wear, and corrosion.

What Is Form Measurement?

Form measurement assesses the geometric shape and deviations of a surface or feature from its ideal form. It includes the evaluation of parameters such as:
